Measuring the alignment of a portfolio with 2° scenarios

Stanislas Dupré, Jakob Thomaé, 2° Investing Initiative

17:35 – 18:00

Discussion

Moderator: Hugues Chenet, 2° Investing Initiative

Description

Finance plays a key role in the transition to a low-carbon economy. The Sustainable Energy Investment (SEI) Metrics project develops a methodology to measure the alignment of financial assets and portfolios with 2°C climate scenarios, for financial institutions and policymakers. A test version of the tool is available to market actors.
