

## SENIOR SOFTWARE ENGINEER

### THE ORGANIZATION

The 2° Investing Initiative [2°ii] is the leading think tank on integrating climate-related objectives into financial market metrics, processes, and regulation. Our mission is to align the financial markets with the goals of the Paris Agreement. The association was founded in 2012 in Paris, and now employs 30 people based in New York, Berlin, London and Geneva. All entities of the group are non-for-profit, the US entity is a 501c3.

Our work is global, both in terms of geography and engaging key actors. Our specificity is to be vertically integrated: we design the public policies, the standards, the data and tools that enable the implementation of our recommendations, and directly provide them for free to financial institutions and regulators. Our team include policy analysts, software engineers, data scientists and business consultants.

2°ii is notably know from having introduced climate-scenario analysis for investment and lending portfolios. Our approach has been adopted and endorsed by authorities (France, Switzerland), financial supervisors (California, Europe) and various investors associations. It is now used by hundreds of financial institutions and the leading financial supervisors.

2°ii research has also triggered the obligation for financial advisors based in Europe to address the 'non-financial' investment objectives of their retail clients. In the next few years, we will invest in the implementation of this reform in Europe and its exportation in other jurisdictions. Our work notably involves policy research, legal analysis, behavioral science research, database and software development.

### JOB DESCRIPTION: SENIOR SOFTWARE ENGINEER, GREEN FINTECH

In the context of our project on the integration of sustainability preferences in financial advice, we are recruiting a senior software engineer to design our 'online financial advisor'. The objective is to create the state-of-the art financial planning and product scanning tool for retail investors, with a focus on European markets. The tool will be a non-commercial, unbiased and free public good, financed primarily by governments and philanthropic sponsors. An open-source version will also be made available to commercial organizations.

As senior software engineer, you will work with the Group CEO, our policy analysts, data scientists and business consultants, to co-design the tool and processes, and supervise junior software developers.

We are looking for candidates with experience in web-based software development, experience in start-ups related to robo-advisors, online banking, and/or financial product comparison is a plus.

You will work from our New York Office (Grand Central), with travel opportunities in Europe. We offer a competitive salary and the opportunity to develop international visibility and personal network among large financial institutions and financial supervisors globally on the emerging topic of fintech and sustainability.

Please send your application (CV and cover letter in English indicating your earliest possible start date) to: [jobs@2degrees-investing.org](mailto:jobs@2degrees-investing.org)

We are committed to building a diverse team and encourage applications from female and minority candidates. Valid authorization to work in the US is a pre-requisite.
